

Don't just take our word for it...

You've heard from us, now take it from the people who have used our services and have been thrilled with the results!

Bush & Campbell Accountants

"Bush & Campbell Accountants run a busy office in Wagga Wagga with a team of around 50. With rising power prices, our electricity costs were going through the roof. Running air conditioning and heating systems, lighting, desktop computers with multiple screens and multiple servers for our business means we use an enormous amount of power, all during peak daylight hours.

"We decided that we needed an alternative source of power and solar was the answer. We commissioned quotes from a number of providers but choosing Solar Professionals was an easy decision because they are a client of ours and their solution was the most cost effective, straightforward and simple.

"We now have a 40.5KW solar power system installed on the roof of our Wagga office and the cost savings for Bush & Campbell has been fantastic. At current performance the system will pay for itself within three years and we just wish we had made the switch to solar earlier."

Amanda Powell, Director, Bush & Campbell Accountants

Wagga Trucks

Established in 1997, Wagga Trucks is a family owned and operated business, which has grown to be one of the largest used truck dealers in regional Australia. Owner, Matt Shaw saw an opportunity to capitalise on energy costs by converting to solar power and immediately contacted Solar Professionals.

"I contacted Solar Professionals for a quote after seeing a number of their residential and commercial installations in the Wagga area. They are one of the largest solar providers in the Riverina and were able to manage the project end to end.

"As we utilise our power during the peak daylight hours of 10am – 3pm, our electricity bill was constantly on the rise. Since installing the system, our power bills have been reduced and have remained at a controlled level.

"Working with Solar Professionals was easy: they were great to deal with and I'd recommend anyone in business who is looking to lock out the rising energy costs to give them a call."

Matt Shaw, Owner, Wagga Trucks

Ron Crouch Transport

Wagga Wagga based trucking company, Ron Crouch Transport, services country NSW and major cities on the eastern sea board. With the ever rising cost of electricity they took the opportunity to explore alternative energy options.

Robyn Mulqueoney, Corporate Services Manager, explains how they made the switch to solar: "Solar is a more cost effective way for us to power our business, particularly in light of rising electricity prices and the uncertainty of future price hikes.

"As a local business, we too like to support fellow local businesses where we can and as such we engaged the assistance of local provider, Solar Professionals, to manage our install.

"We couldn't be happier with the result. Solar Professionals took the time to understand our business by conducting a detailed analysis of what our energy requirements were and provided a tailored solution. I would recommend businesses in the Riverina looking to make the switch as we did get in touch with Solar Professionals."

Solar Professionals

Making the sun your asset

NSW Department of Education and Communities (DEC)

Cost savings and reducing carbon footprint were the driving forces behind the Riverina DEC team wanting to go solar.

As the team had not gone through this process before, they needed to engage the assistance of a company that had a seamless process in place and could provide end-to-end management of the installation.

Jarrod Maher, DEC Riverina Project Manager contracted Solar Professionals to complete the installation of a 30KW system at a school in Albury.

"Solar Professionals' ability and professionalism really got us over the line. They were more than happy to assist with the administrative side to get the necessary departmental approvals in addition to completing the installation without any fuss whatsoever.

"We couldn't be more delighted with the result. The school's power bill has reduced and we are proud to say we have significantly reduced our carbon footprint. Further, we've had no maintenance issues or recalls since the system was installed."

NSW Department of Education and Communities (DEC)*

Kotzur

By 2012, Kotzur's unit cost for electricity had increased by a staggering 92% in five years. This, combined with predictions of further increases of 10-15% per annum, meant it was time to consider off-grid electricity sources.

"We quickly found that many of the large solar providers we approached were merely project management businesses who would contract from a pool of installation providers. This meant the provider contracted for the project would not actually be carrying out the installation.

"With Solar Professionals we knew we would be dealing with one company, also based in the Riverina, for the entire project – from design to installation and ongoing maintenance. They were honest, straight to the point, responded to our questions promptly and were open and transparent with their calculations and modelling.

"Kotzur's solar power system has a total registered capacity of 400KW. To date, the total output of the first stage of the project which has been installed and commissioned is 226KW, making it the largest single metered solar system on the Essential Energy NSW network.

"The biggest benefit to us from the installation has been a reduction in energy consumption from the grid and power costs of over 50%. In addition, from a corporate social responsibility perspective, we have received a lot of positive exposure from making the switch to solar."

Cohen Vanderline, Accountant, Kotzur

Mercury Motor Inn

"With electricity prices getting ridiculously high and the ongoing expense of running power-hungry devices, like air conditioning and fridges, as well as the motel laundry, we decided it was time to switch to solar power.

"Thanks to Solar Professionals the Mercury Motor Inn now has a 20KW solar power system installed on the roof, which has really made a difference in reducing our electricity bill, even with further recent price increases.

"Solar Professionals was personally recommended to us and worked hard to make sure we got a good deal. Working with them has been great and we've been especially impressed with their after sales service. They have gone out of their way to firstly plan an efficient installation for us and then also have personally helped us work out other ways to reduce our power expenditure."

Michael Pembleton, Owner, Mercury Motor Inn
